Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

The finality of the rejection dated 6.4.03 has been withdrawn in view of the newly discovered Japanese pat. '002 showing alternating wood grain.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

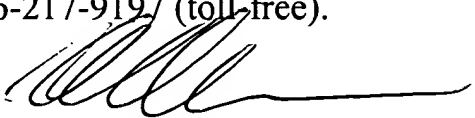

Claims 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anguera '191 in view of either Larsen or Anguera '395 and Lewis. Anguera '191 teaches the claimed method with the exception of the claimed cross sectional shape of the boards and the aligned drilling and pin press axis. Both Larsen and Anguera '395 show boards having the claimed cross sectional shape to enable their use for scaffolding and a walking surface, respectively. Lewis teaches the method of locating the drilling and pin axis in an aligned manner to provide an efficient time saving operation. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Anguera "191 with boards of the claimed cross sectional shape to enable their use for scaffolding and a walking support surface, and to modify his machinery to comprise aligned drilling and pinning axis to increase efficiency of his laminating operation.

Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anguera'191, either Larsen or Anguera '395, and Lewis as applied to claims 11-13 above, and further in view of Japanese pat. '002 to Anglehart. Anglehart teaches the method of alternating the wood grains of side-by-side boards to enable a high resistance to warpage. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Anguera '191 with boards arranged with alternating wood grains as claimed to resist warpage.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alvin C. Chin-Shue whose telephone number is 703-308-2475. The examiner can normally be reached on Monday-Friday, 8:00 a.m. - 4:30 p.m..
